Summary

Distributed Systems Engineer with 4+ years of experience in cloud storage, backend infrastructure, and production reliability at Microsoft and Amazon. Particularly interested in the intersection of AI/ML systems, data infrastructure, and distributed compute including storage engines, query execution, and infrastructure for large-scale ML workloads. Portfolio: pratik0316.github.io.

Work Experience

Microsoft

Sept 2024 – Present

Software Engineer — Azure Storage (Storage Resource Provider)

- Scaled **Azure Direct Drive** provisioning throughput from **300/min to 1000/min** through **DNS** architecture redesign.
- Eliminated subscription-level contention in **RBAC** notification handling, reducing **HTTP 409** conflicts from **150/hr to zero**.
- Mitigated critical security vulnerability exposing **Azure Storage SAS keys** in logs through automated detection and service hardening.
- Led migration of **4+ services** from **IFX** to **OpenTelemetry**, reducing metric cardinality and improving telemetry scalability.
- Improved team efficiency and review consistency by building a **GitHub Copilot skill** that automates safety certification documentation for externally exposed service APIs.
- Owned production incident response for Azure Storage control plane, driving high-severity investigations, service recovery, and root cause analysis.

Amazon

July 2022 – Aug 2024

Software Engineer

- Architected and scaled real-time **CDC** pipeline (**DynamoDB** → **Kinesis** → **Lambda** → **OpenSearch**) supporting **6K writes/min**, resolving hot-partitioning and consumer bottlenecks.
- Eliminated **60K+/hour** false-positive voice command triggers through redesign of command-processing logic.
- Led externalization of **Personal Knowledge Service** to Alexa mobile clients, reworking **AuthN/AuthZ** architecture and scaling backend capacity for launch readiness.
- Tech stack: Kotlin, Golang, Dagger, Guice, AWS Step Functions, ECS, Lambda, API Gateway, DynamoDB, OpenSearch, AWS Glue, CDK, React.

CRED

Oct 2021 – Mar 2022

SWE Intern — SRE

- Built internal **IAM** access management portal enabling self-serve role grants across **AWS** accounts, reducing SRE on-call involvement by **50%**; implemented backend workflows using Golang, Python, Step Functions, Lambda, API Gateway, and DynamoDB.
- Built backend automation for cross-account **IAM** user migrations, handling policy mapping, permission boundaries, and rollback for seamless access transfers across ECS and Aurora-backed services.

Google Summer of Code @ AboutCode

May 2021 – Aug 2021

Open Source Contributor

- Enhanced DeltaCode diff engine using VirtualCodebase library and improved API consistency through Azure CI quality checks.
- Added ReadTheDocs documentation and containerized the project with Docker to improve developer onboarding.

Technical Skills

Languages	Python, Kotlin, Go, C#, Rust
Cloud & Infrastructure	Azure, AWS, Kubernetes, Docker
Distributed Systems & Data Infrastructure	DynamoDB, OpenSearch, Kinesis, Lambda, ECS, Apache Spark, Apache Arrow
Observability & Reliability	OpenTelemetry, CI/CD, Production Debugging, Incident Response

Certifications

- Introduction to Model Context Protocol** — *Anthropic*. Covers the Model Context Protocol (MCP) standard for connecting AI models to external tools, data sources, and services through a unified interface.

Education

B.E., Computer Science & Engineering	Aug 2018 – Apr 2022
Jadavpur University	GPA: 8.83 / 10.00
